for Disease Control (CDC) Continued studies have identified over 100 similar cases across the country. — **Case Western Reserve**

Mold Causes Sinus Problems

1 in 7 Americans suffers from acute fungal sinusitis, resulting from exposure to mold.

— **Mayo Clinic**

Standard Treatments Do Not Work

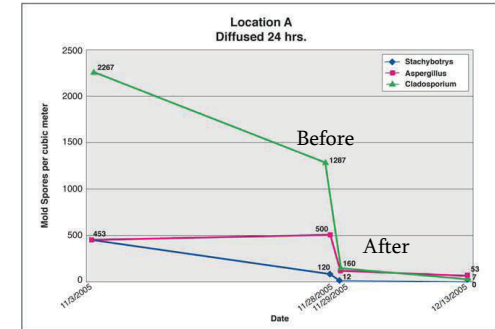

Bleach, Ozone, and chemicals typically used for treating mold are ineffective and are hazardous to your health. — **US EPA** and the **American Industrial Hygiene Association.**

Eliminate Toxic Mold in as little as 24 hours

The chart in the next column shows the results of diffusing therapeutic grade essential oils at an apartment building contaminated with 3 different black toxic molds. The first set of samples were taken after a hospital disinfectant, an industrial strength fungicide, and bleach had been used.

Please note that the levels of all 3 black molds dropped dramatically after only 24 hours of diffusing this proprietary blend of essential oils.

More importantly, no diffusing was done during the following 2 weeks and mold levels continued to drop. The toxic mold, *Stachybotrys chartarum*, declined to 0.

Samples collected by Close Environmental Consultants, a private environmental engineering firm. Laboratory analyses performed by Environmental Science Corporation, an EPA certified laboratory.

Tests performed at numerous sites and various types of locations have produced similar results as those you see above.

SAFE — This proprietary blend of therapeutic grade essential oils is approved by the FDA as a Food Supplement.

EFFECTIVE— This is the best treatment available for eliminating, remediating and preventing toxic mold.
