

The Benefits of Drinking Ionized Water

1. Water Ionizers provide high pH alkaline water to neutralize acidity in your body, which is the root cause of disease and symptoms associated with aging.
2. Water Ionizers produce antioxidants by creating negatively charged water, scavenging up damaging free radicals. This slows down your oxidation (aging)!
3. Water Ionizers increase the oxygen available for mental clarity and energy. Dis-ease, including cancer, cannot live in an oxygenated, alkaline environment.
4. Water Ionizers micro-cluster water molecules to hydrate our cells more easily, pushing out toxins and facilitating detoxification on the deepest cellular level.

AlkaBlue LX Water Ionizer

- .03 Micron Ultra-Filtration System
- 9 to 12 Months Filter Life
- \$799
- \$87 Ultra-Filter Replacement
- \$89 Optional .5 Micron Carbon Block Pre-Filter

Pg. 792-793, by W. John Diamond, M.D. and W. Lee Cowden, M.D. with Burton Goldberg.

MICROWATER (IONIZED WATER)

This is a new water filtration system with potential therapeutic benefits, originally developed in Japan. Microwater uses a technology that filters and enhances the quality of water by making the size of water molecules smaller. It is already a US\$700 million a year industry in Japan and is now being introduced in the U.S. The microwater unit, hooked up to a faucet, uses a carbon activated filter to remove impurities from the water, then it injects a small electrical charge into the water that separates the water into 2 kinds : Flowing out of one tube is an acidic water (with positive ions) useful for topical, external uses: out of another tube comes alkaline water (with negative ions) for drinking. It makes this separation at the rate of 1 gallon per minute.

The applications of the acidic portion of microwater are numerous and quite surprising. According to the research, and based on early reports from African and South American users, acidic microwater acts as a "superoxidant" to disinfect and sterilize surfaces, skin, wounds, even surgical instruments. It can kill bacteria and viruses; it can promote the healing of acne, eczema, wounds, sore throats, and blisters; and, it can improve skin quality. When used on foods, it can retard spoilage or act as a bacterial cleanser for meats. It can be used by dentists to sterilize the mouth during dental procedures; and, you can use it as a mouthwash when you brush your teeth.

Regarding the alkaline microwater, here the smaller size of the water molecules shows its advantage. According to Hidemitsu Hayashi, M.D., alkaline microwater can act as a powerful antioxidant in the body, destroying harmful free radicals, just as do antioxidants such as Vitamin A, C & E. Although the reports are still, strictly speaking, anecdotal, in those who drank microwater everyday for several months, Dr. Hayashi reports that he and his colleagues have seen improvements in diabetes, constipation, ulcers, blood pressure, allergies, circulation, migraines, obesity, osteoporosis, and menstrual irregularities. Not surprisingly, the use of microwater as a preventive medicine technology is reportedly expanding in Japanese clinics and hospitals.

Once microwater gets absorbed by the body's cells, says Dr. Hayashi, it helps to dissolve acidic waste that has accumulated there over many years and reduces the chronic dehydration common in many people. In effect, thanks to the smaller molecular size, more water is absorbed by the body and more water actually penetrates all the cells & tissues; when the body has more water to work with (and in this case, a more refined form of it), it is better able to deliver nutrients to all the cells, tissues, and organs.

The water tastes unusually smooth and soft due to its high concentration of negative ions (typical of pure mountain springs), so it can be quite refreshing. "We are advancing the theory that the most effective and economical source of an antioxidant is ordinary water after it is filtered and treated with a microwater unit," says Dr. Hayashi.

HOW TO GET YOUNGER

by Sang Whang

Mr. Sang Whang is a successful inventor, scientist, and engineer. He was the Vice President of Research at Racal-Milgo, Inc., a large manufacturer of data communications equipment in south Florida. While he was heading a data communications consulting company in Miami three years ago, he lowered his blood pressure by drinking alkaline water. Since then he has been interested in and involved with the study of non-drug, scientific health improvement devices developed and used in Japan.

During his research, Mr. Whang has discovered a new theory of aging and reverse aging. He explains the health and aging processes not in complicated medical terms, but in simple scientific terms. He has developed a deep empathy for human suffering over the years and is committed to helping improve the quality of health for people everywhere.

INTRODUCTION

In order to learn how to get younger, we must understand the process of aging.

Handling natural health improvement devices developed in Japan a few years ago, I have witnessed, as well as personally experienced, many mysterious phenomenon in the reverse aging effect.

Being a scientist, engineer, and inventor, I have tried to understand and explain the phenomenon scientifically, applying the scientific principles of those non-drug, natural health improvement devices. During the course of the study, I came to a realization of what the human aging process is about. The great news is that, with this new theory, the reverse aging process can be explained, and ANYBODY CAN GET YOUNGER IF HE OR SHE SO DESIRES.

THE AGING PROCESS

We get old because we are not disposing of all the internally generated wastes and toxins, and accumulate the leftovers within our body.

For our body to function and to maintain body temperature, we burn nutrients within our cells. The main ingredients of all foods, expensive or inexpensive, gourmet or junk, vegetable or meat, alkaline or acid, are either carbohydrates, proteins or fats. And they are nothing but the combinations of four elements: carbon, nitrogen, hydrogen and oxygen.

After these nutrients are burnt (oxidized) in the cells, they all turn into organic acids: carbonic acids, uric acids, lactic acids, fatty acids, ammonia, etc. Fats are acidic even before oxidation. The Chinese word for oxygen is written with two characters, "sahn-so". They literally mean "acid root".

These acidic wastes and toxins are disposed out of the body in liquid form, as urine or perspiration, after first being dissolved into the blood. Every element within our body was placed there by the blood and can come out of there by first being dissolved into the blood and then being carried out. If anyone loses ten pounds by any dietary means, it can be said that most of that ten pounds came out through the urine.

Unfortunately, due to our life styles and environments (i.e., too much ingestion, overwork, over indulgence, not enough rest, staying up late, not enough exercise, inadequate water consumption, smoking, pollution, etc.) the body cannot get rid of all the acidic waste products that it generates within. We accumulate these left over waste products somewhere within our body. This is the process of getting old.

To make matters worse, mixed with these organic acids are inorganic acid minerals such as chlorine, phosphor, and sulfur that come in with most of our acidic foods: meats, grains and root crops. We don't eat enough of alkaline foods such as fruits and vegetables that contain inorganic alkaline minerals: calcium, magnesium, sodium, potassium, etc.

Although the amounts of inorganic minerals are small compared with the organic acid wastes that the body produces, they contribute more towards the acid side. However, one important thing to note is that even if one does not eat any acidic food at all, as long as carbohydrates and proteins are consumed, the body produces much more acidic wastes than the inorganic alkaline minerals can counteract.

We are born with high alkaline blood pH of 7.44. As we get older, the blood pH drops down to 7.35 or below. The blood pH referred to here is the artery blood pH. The difference of 0.09 in pH value seems very small but since pH is logarithmic, the amount of hydroxyl ion (OH-) in 7.44 pH is 1.23 times that of 7.35 pH, because $10^{0.09} = 1.2303$.

The hydroxyl ion is an oxygen donor while the hydrogen ion (H+) is an oxygen taker. In other words, young people carry 23% more of the oxygen donors in their blood than older people. No wonder they are more energetic.

Uric acid is nearly insoluble in water, alcohol, and ether, but soluble in solutions of alkaline salts. In other words, it becomes soluble in alkaline water. Arthritis and gout are caused by uric acid deposited between the joints, non-dissolved due to the low alkalinity of an older person's blood. Drinking acid free alkaline water will gradually elevate one's blood pH and the gout will disappear naturally. (More about this acid free alkaline water later.)

As we live with poor waste disposal systems for a long period of time, some parts of our body build up more acids than others, and they can clog up capillary vessels around those acidic areas. This causes some body organs to function in a sluggish manner. We feel tired and run down sometimes for no reason whatsoever, and adult diseases such as high blood pressure, arthritis, diabetes, asthma, allergies, etc. start to set in. WE SIMPLY ACCEPT THESE PHENOMENA AS "GETTING OLD."

In some extreme cases, the build up of acidic elements is so great that it starts to destroy healthy cells around it. Healthy cells must maintain a slightly alkaline pH level. Some cells change their formula in order to survive in an acidic environment. If they are successful, this is the beginning of cancer. Cancer cells are acidic while healthy cells are alkaline. Even if the cancerous tumors are completely removed surgically, as long as the acidic conditions in the area remain, the chances are that new tumors will develop around the same area.

Exactly where the left over waste products are accumulated may vary according to every individual. However, the parts of the body where wastes accumulate first may determine what kind of adult disease that individual may develop first. Within one family, the storage places may be similar. This may explain the hereditary effects of certain adult diseases.

THE REVERSE AGING PROCESS

Because the accumulation of waste products inside the body is the aging process, helping the body to get rid of the OLD waste products is the reverse aging process.

This reverse aging process takes two steps. The first step is to develop a good disposal system and the second step is to pull out the old wastes from their hiding places.

Development of A Good Disposal System

Since, as mentioned before, the waste disposal is done in liquid form by urine and perspiration, it is imperative that we drink plenty of water. When one is going through any diet program, doctors tell him to drink 8 glasses of water a day. They know the disposal is through urine, but they don't tell you what kind of water to drink.

Since all waste products are acidic, the best kind of water is acid free alkaline water. Drinking 4 glasses of this alkaline water is much more effective than 8 glasses of regular, bottled water or filtered tap water. There are devices called water ionizers that split alkaline minerals and acid minerals in regular tap water by electrical means.

A quality water ionizer takes in regular tap water which has both acid and alkaline minerals in it and has a typical pH value of 7. The system then releases water with a pH value of 9 or higher with all the alkaline minerals from the original tap water. At the same time it releases acidic water with a pH value of 5 or lower with all the acid minerals in the original tap water.

Since this alkaline water has twice as many alkaline minerals as the original water but NO acid minerals, it is more than twice as potent as the original water. Inside our body, it will neutralize only acidic elements and discharge them safely out of the body. Drinking 8 glasses of regular water can leach out acidic wastes as well as some valuable alkaline minerals such as potassium. That's why doctors test your blood when you are going through a serious diet program. With this alkaline water, 4 glasses are sufficient and there is no worry about losing potassium from your system.
